Abstract of the Disclosure

19       A multi-layered and quick change signage system is provided. A frame carries a  
20 transparent cover sheet and behind the transparent cover sheet the frame carries a plurality  
21 of opaque sheets, each of which contains a different graphic image. The transparent cover  
22 sheet also carries alphanumeric information such as a person's name and title. The user of  
23 the sign may quickly change the material displayed on the sign by simply changing the  
24 opaque sheet which is mounted immediately behind the transparent cover sheet. A non-glare  
25 plastic lens is carried on top of the transparent cover sheet. The signage system is  
26 particularly useful in conjunction with office cubicles.
